

F-48

Description

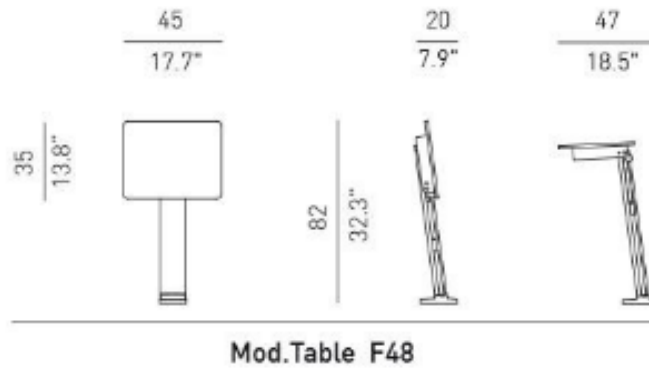

The F48 table is a unique concept, the perfect accessory for turning any seat into an authentic working space. This large, fold-away table for individual use is an optimal solution for auditoriums, press rooms, educational centres, parliaments and multipurpose spaces.

This individual table of generous sizes (45x35 cm) is fixed to the floor and, therefore, totally independent of the seat. Its independence with regard to the seat ensures that it is completely stable and will never be affected by the movement or vibration caused when the seat in front is occupied.

The table opens by means of a simple intuitive lift up and twist movement. Thanks to its anti-panic folding system, the table goes into the fold-away position with the movement of the user getting out of the seat. With this folding system, the hall can be vacated quickly and the aisles are always left clear. Its internal shock-absorbent system ensures the table returning to its initial position slowly and silently.

The table is fixed to a column of extruded aluminium. The linear displacement guides are included in the column and do not required any maintenance thanks to the absence of springs.

Optionally, it can incorporate a communications unit (with microphone, voting system, translator, power plug system and data connection...) manufactured in aluminium and fixed into the central column.

Technical Data

- Folds through gravity, with no mechanism and is, therefore, maintenance-free.
- Supported by an aluminium column with guide rails on which the wooden work table can slide.
- Optionally, it can incorporate communications unit.
- Standard useful working space: 35 cm x 45 cm.
- Anti-panic folding system.
- The floor anchorage can be direct or via a guide fitted into the floor.
- Installed independently to avoid movement by any other user of the nearby seats.
- The column profile is designed to house cables and has the option of incorporating a CSI communications box.
